The Glass Program operates one of the most comprehensive studio glass facilities in the United States and offers a broad art training, coupled with a focus in glass practice, integrated within a science and humanities curriculum that is designed to prepare students for varied roles as practitioners, innovators and leaders in the field. Students pursuing the glass program aim to meet the challenge of visual problem solving and artistic striving by using glass as a material focus. The undergraduate glass student receives practical instruction in a full range of glass working processes and becomes familiar with the use of glass forming equipment, leading to independent creative work and research.
